

How to start EX2 HTTPS instance with nginx and node (Server example)

Using second ubuntu 20 (free tier)

Source: <https://youtu.be/ehITvx8VPFI>

Log into server with SSH

Root user: `sudo su -`

Install nvm (node version manager) :

`curl -o- https://raw.githubusercontent.com/nvm-sh/nvm/v0.38.0/install.sh | bash`

Install node: `nvm install 16`

Update: `apt-get update`

Install Nginx: `apt-get install nginx`

Clone repo;

`Cd ..` out of ~

Go here: `root@ip-172-31-2-133:/etc/nginx/sites-available# nano default`

Make the default file look like the example below using the template

Example:

```
server {
    listen      80;
    server_name aws-prac.com;

    location / {
        proxy_pass http://172.31.2.133:8080;
        proxy_http_version 1.1;
        proxy_set_header Upgrade $http_upgrade;
        proxy_set_header Connection 'upgrade';
        proxy_set_header Host $host;
        proxy_cache_bypass $http_upgrade;
    }
}
```

Template:

```
server {
    listen      80;
    server_name URL CONNECTED TO PUBLIC EC2 IP;
```

```
location / {  
    proxy_pass http://PRIVATE_IP:PORT;  
    proxy_http_version 1.1;  
    proxy_set_header Upgrade $http_upgrade;  
    proxy_set_header Connection 'upgrade';  
    proxy_set_header Host $host;  
    proxy_cache_bypass $http_upgrade;  
}  
}
```

Go to Cert bot and follow directions for the server / nginx that you're running / using

Cert bot does the certification automatically using the basic default file values inputed

<https://certbot.eff.org/instructions?ws=nginx&os=ubuntu>
